

# 16<sup>th</sup> HPB Report 2022

FIMM Health Policy Board

# FIMM Guidelines<sup>2013</sup> need revision – why ?

# FIMM Statutes: Article 3

...

2.3 After **2025** Ordinary members are obliged to identify and present an educational curriculum which fulfils the **300 hours of training** in Manual/Musculoskeletal Medicine criteria of the valid version of the FIMM Guidelines for Education and Safety.

# Consultations by the Education Board

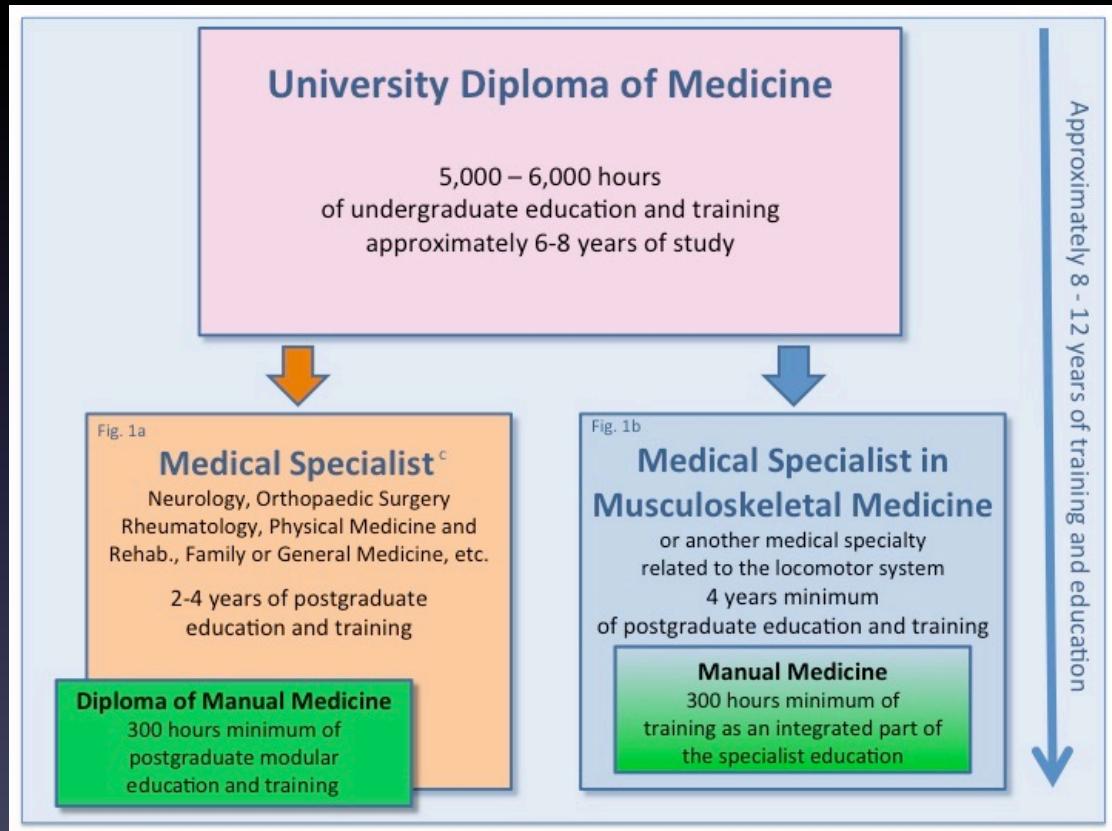

- Education programs of the society members
- Some society members did not apply for consultation
- Their structure did not fit with FIMM Guidelines

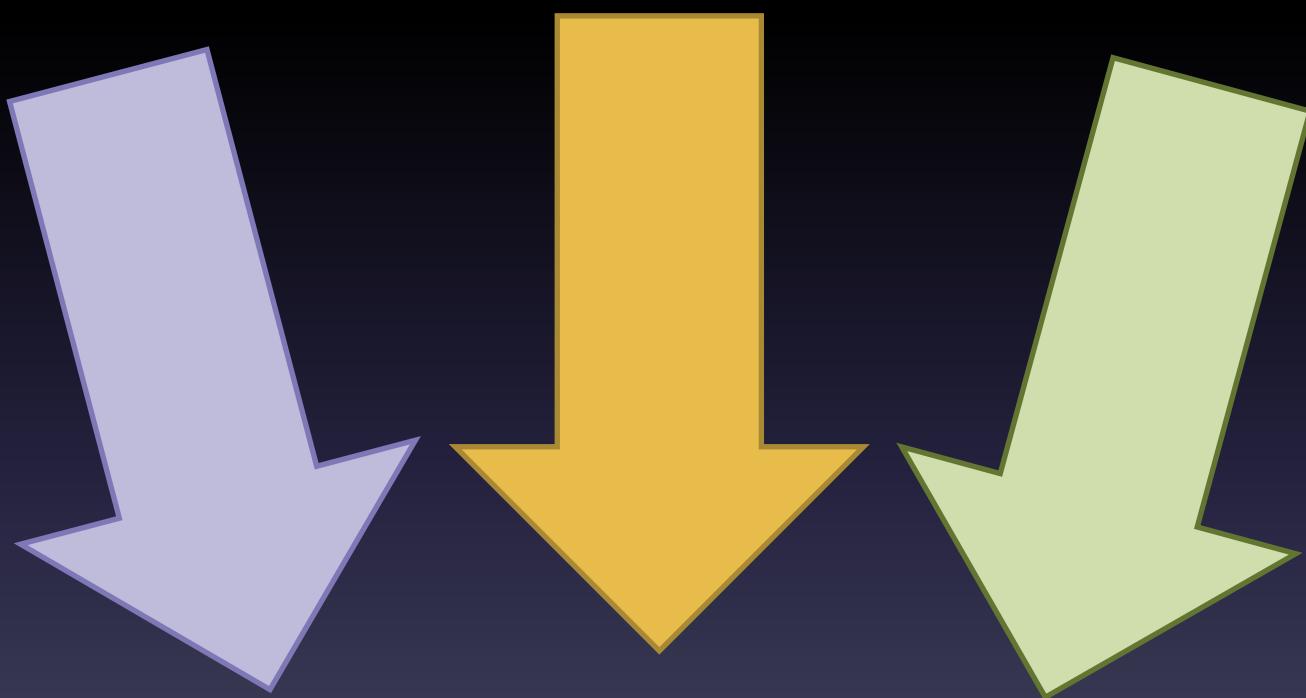

Ass. Prof. Ilia Todoroff  
Education Board Director

# Pathway to diploma

There are more ways to reach diploma

300 hours of training

## University Diploma of Medicine

5,000 – 6,000 hours  
of undergraduate education and training  
approximately 6-8 years of study

Fig. 1a

### Medical Specialist<sup>c</sup>

Neurology, Orthopaedic Surgery  
Rheumatology, Physical Medicine and  
Rehab., Family or General Medicine, etc.

2-4 years of postgraduate  
education and training

#### Diploma of Manual Medicine

300 hours minimum of  
postgraduate modular  
education and training

Fig. 1b

### Medical Specialist in Musculoskeletal Medicine

or another medical specialty  
related to the locomotor system

4 years minimum  
of postgraduate education and training

#### Manual Medicine

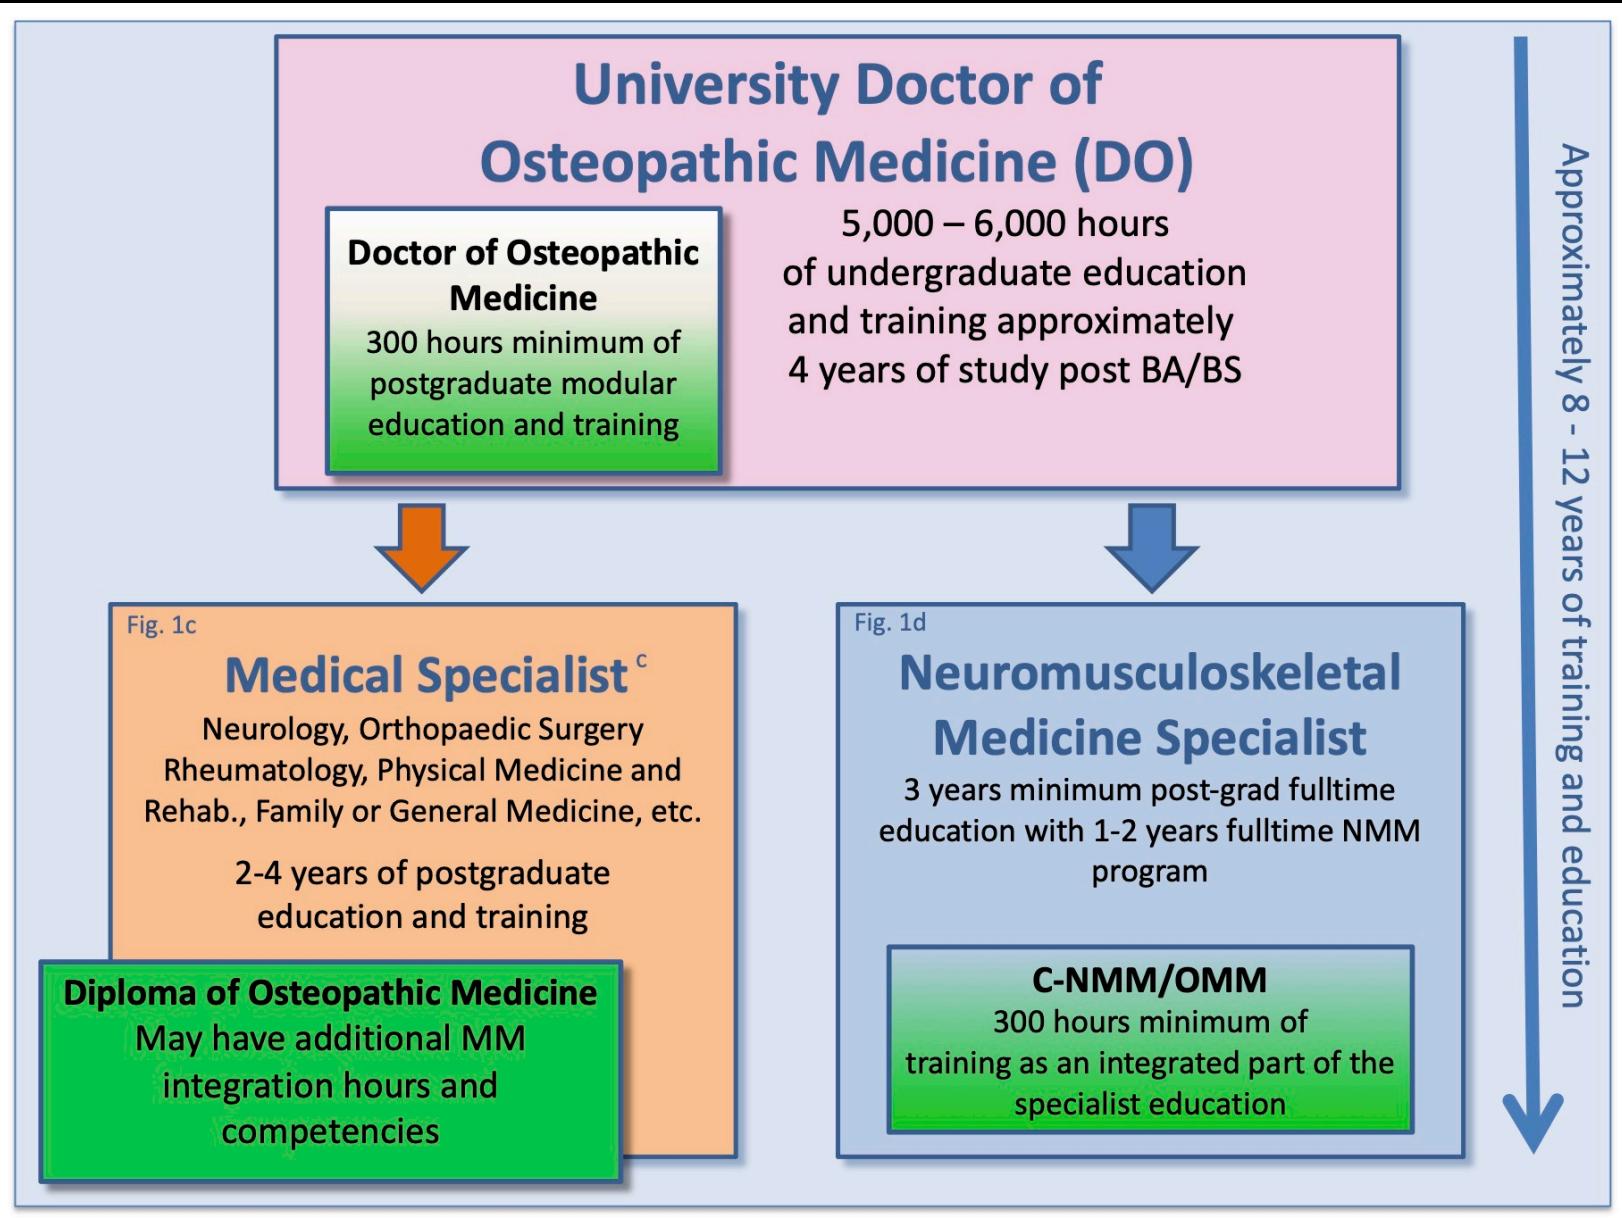

300 hours minimum of  
training as an integrated part of  
the specialist education

Approximately 8 - 12 years of training and education

Capacity model

Component model

Capacity model

Component model

## University Doctor of Medicine (MD)

5,000 – 6,000 hours of undergraduate education and training approximately  
4 years of study post BA/BS

Fig. 1e

### Medical Specialist<sup>c</sup>

Neurology, Orthopaedic Surgery  
Rheumatology, Physical Medicine and  
Rehab., Family or General Medicine, etc.

2-4 years of postgraduate education and training

#### Osteopathic Recognition

Additional required hours and competencies

Fig. 1f

### Neuromusculoskeletal Medicine Specialist

3 years minimum post-grad fulltime education with 1-2 years fulltime NMM program

#### C-NMM/OMM

300 hours minimum of training as an integrated part of the specialist education

Approximately 8 - 12 years of training and education

Capacity model

Component model

## 6. Glossary

Most of the terms used in these guidelines are defined in the FIMM-Glossary v7.2, published on the website in three languages (<http://fimm-online.com>).

The English version of the terms is given hereby.

Only terms used in this document are given.

**arthrokinematics** Arthrokinematics is the field of kinematics that is a study of the interrelation between the surfaces of synovial joint.

**articular neurology** The branch of neurology that involves the study of the anatomical, physiological, and clinical features of the nerve supply of the joint systems in various parts of the body <sup>21</sup>.

**capacity-model** The term capacity is part of nomenclature of the Bologna process, which is a series of ministerial meetings and agreements between European countries designed to ensure comparability in the standards and quality of higher education qualifications. The capacity-model describes Manual Medicine as a subspecialty or a capacity in relation with any medical specialty dealing with clinical medicine. It presupposes at least a level of training which continues in the post-graduate, including an exam based on specialty level.

**component-model** The component-model describes Manual Medicine as an integrated component of the curriculum of the medical specialty of Musculoskeletal Medicine or another medical specialty related to the locomotor system.

# PART I, chapters 3-7

## 3. Categories of education in MM medicine

### 3.1. Category 1, Undergraduate Level

### 3.2. Category 2, Facility Level

### 3.3. Category 3, Specialty Level

### 3.4. Category 4, Master or Doctorate Level

- New designations
- Shift from “300 hours” to levels of competences and expertiese

## 4. Education and Training Category 1 – Undergraduate Level

## 5. Education and Training Category 2 – Facility Level

## 6. Education and Training Category 3 – Specialty Level

## 7. Education and Training Category 4 – Master or Doctorate Level

# PART I, chapter 8

## 8. Core topics and Syllabus<sup>3</sup>

### 8.1. Basic knowledge

### Core topics, competencies, and potential syllabi

#### 8.1.1. Essential knowledge

	category			
- functional anatomy and biomechanics of the locomotor system	1	2	3	4
- physiology and pathophysiology of the locomotor system	1	2	3	4
- principles of MM medicine and major postulated mechanisms of action	1	2	3	4
- anatomy, physiology and pathophysiology of the nervous system in relation to pain and dysfunction	2	3	4	
- specific postulated mechanisms of MM medicine diagnostic and therapeutic techniques	2	3	4	
- clinical syndromes and differential diagnostics of the locomotor system	3	4		
- relevant ancillary diagnostics (e.g. laboratory, imaging, electro-diagnostics) to MM medicine	2	3	4	
- risks and benefits of other relevant therapeutic modalities	2	3	4	

# PART 2

## Part 2: GUIDELINES ON SAFETY OF MM MEDICINE

### 1. Introduction

In general MM procedures are safe and effective. Safety is, or should be, the prime concern of all medical practice. *Primum non nocere* – First do no harm.

Harm includes both physical and psychological aspects. It is equally important to support and repair psychological damage as it is to help heal physical damage. This is done by affirming wellness and independence rather than encouraging the concept of disease and creating dependence.

In order to help the patient heal, it is necessary to make a diagnosis or create a working hypothesis (model understandable to the patient) that allows safe application of MM medicine treatment modalities, be they pharmacological, physical or interventional. This requires taking an appropriate history and undertaking adequate examination and investigation.

# Quality in MM training

WHO: [https://www.who.int/health-topics/quality-of-care - tab=tab\\_1](https://www.who.int/health-topics/quality-of-care - tab=tab_1)

Quality of care is the degree to which health services for individuals and populations **increase the likelihood of desired health outcomes**.

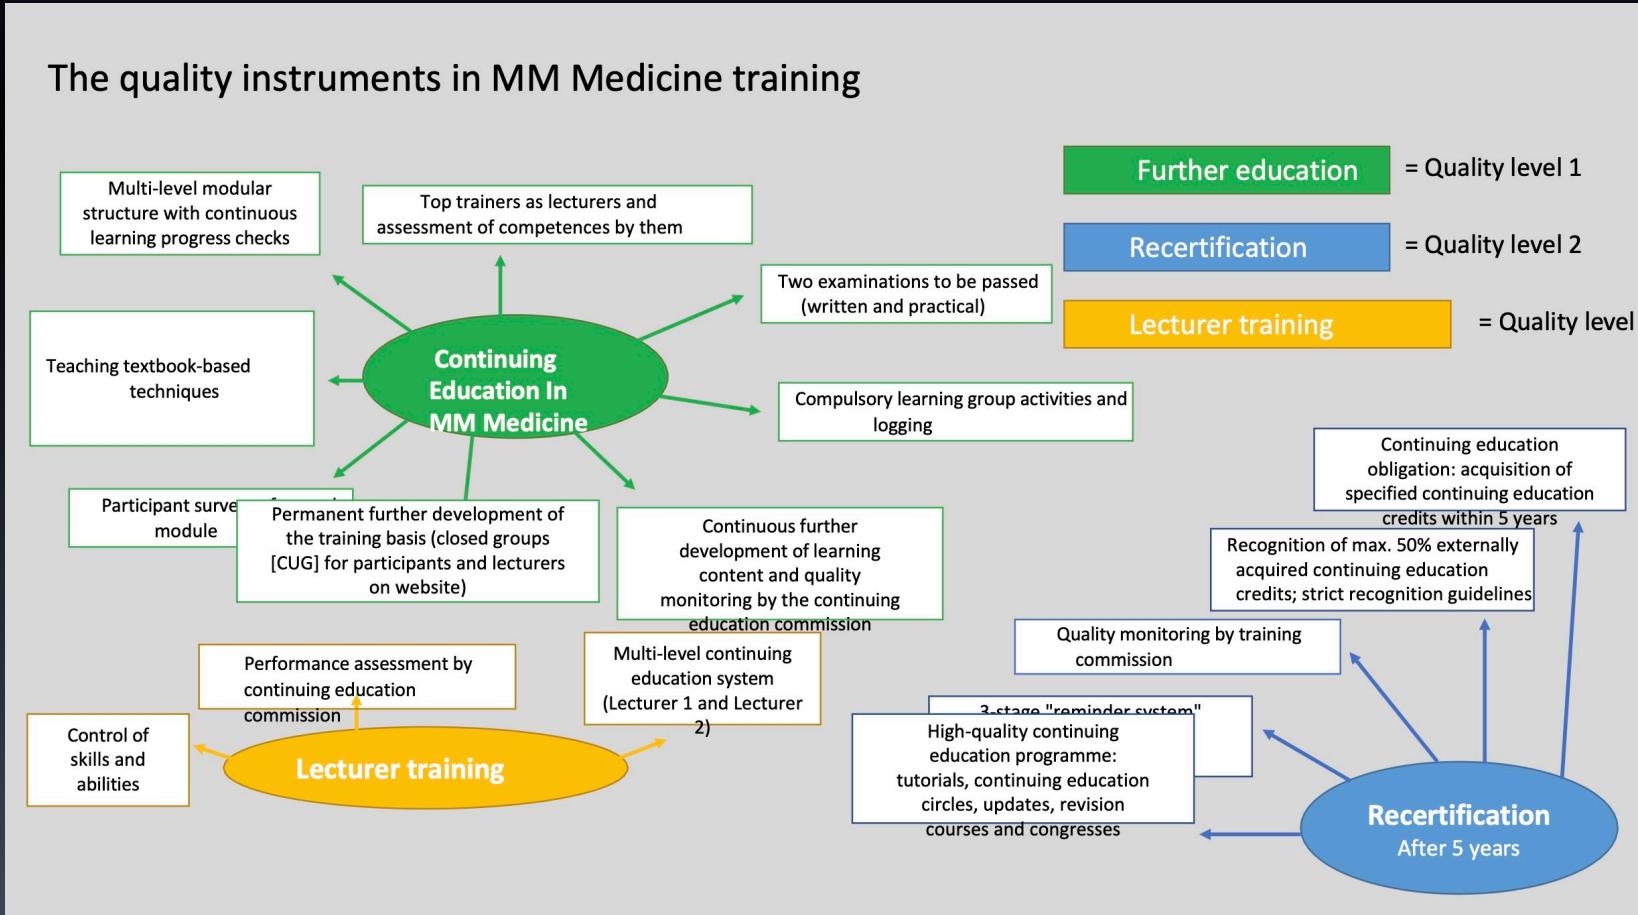

It is **based on evidence-based professional knowledge** and is critical for achieving universal health coverage. As countries commit to achieving Health for All, it **is imperative to carefully consider the quality of care** and health services. Quality health care can be defined in many ways but there is growing acknowledgement that quality health services should be:

effective

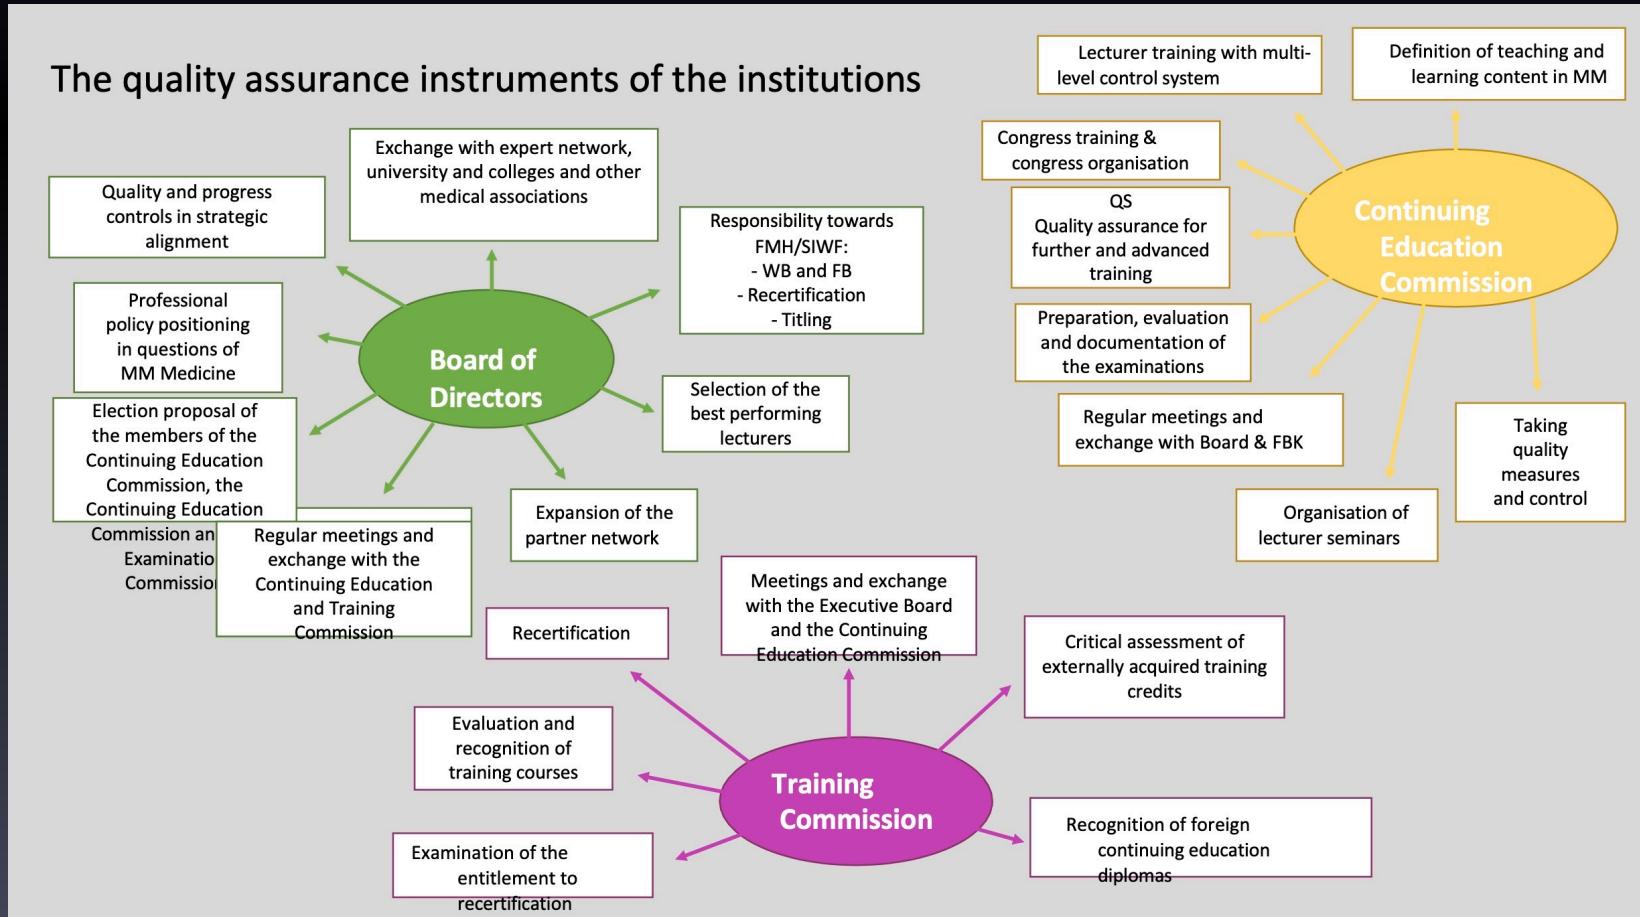

safe

people-centred

# Quality in MM training: Vision sketches

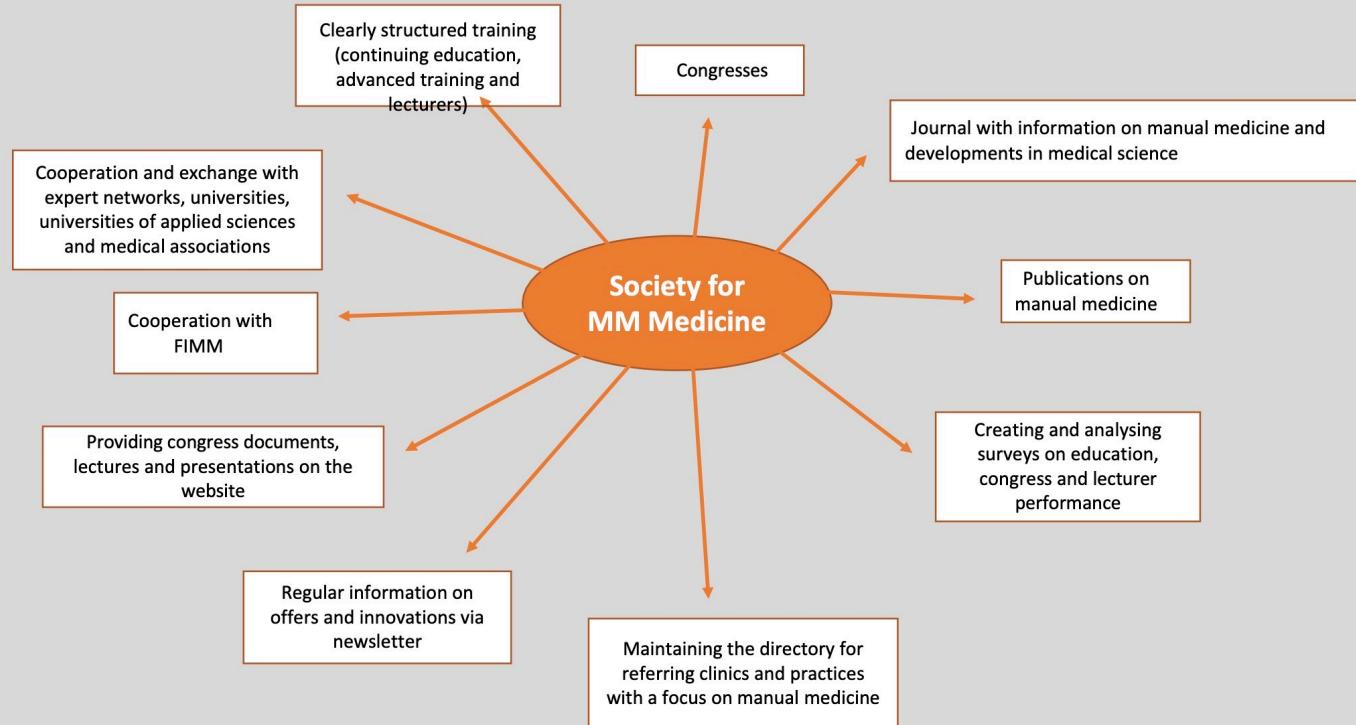

# Quality in MM training: Vision sketches

# Quality in MM training: Vision sketches

## Further quality assurance instruments

Do you feel reflected in these guidelines ?

Thank you.
